

Building for the Future HVAC & Insulation Improvement Project

To care for our church home and those who gather here, we are planning an upgrade to our insulation and heating/cooling systems. This project will provide efficient, reliable, and comfortable heating and cooling for worship, learning, and fellowship - now and for **generations** to come.

Why This Matters

- Current radiant heat system is over 50 years old and inefficient
- Heating is uneven and cooling is very limited
- Poor insulation causes unnecessarily high energy costs
- Parts are becoming obsolete and maintenance is difficult.

Proposed Improvements

- Spray foam insulation in sanctuary and sanctuary classrooms
- High-efficiency forced-air HVAC system with proper ductwork
- Central air conditioning for consistent, year-round comfort

Benefits

- Estimated 30–50% energy savings
- Improved comfort for all gatherings
- Faithful stewardship of church resources
- A more welcoming space for members and visitors

Please keep this portion as a reminder to pray for this project.
